2. Category:Film series introduced in 1999 Category:Film franchises introduced in 1999Compound semiconductor devices have a need for adhesives which are transparent and which prevent the migration of minority carriers, the migration of impurities and alloying during heat curing of the adhesive. Most polyfunctional epoxides will not survive the high cure temperatures required for the formation of a good bond between the adhesive and the semiconductor device. U.S. Pat. No. 3,255,170 to Hagler shows phenolic sulfur-containing resins which contain, in addition to the phenolic groups, from 1 to 10 percents of sulfur atoms in a covalently bound structure. The preferred resin has the formula: ##STR1## Where R is methyl or ethyl, n is 2 or 4, R' is hydrogen,

---

methoxy or ethoxy and a is 0 or 1. The resin can be cured to a thermoset resin at elevated temperatures in the presence of an aromatic or cycloaliphatic solvent. The resin is known to be useful as an adhesive for bonding to high purity semiconductor devices as well as to polymer coated alumina. U.S. Pat. No. 3,840,617 to Tomotake et al. describes amino-acid terminated epoxy compositions useful as dielectric layers in semiconductor devices. U.S. Pat. No. 4,338,463 to Campbell et al. discloses epoxy dielectrics which are doped with 1-10% of an alkaline earth metal and up to 10% of a metal of the first transition series. The metal may be, for example, Ca, Sr, Ba, La, Mn, Zr, Ti, Hf, Nb, Mo, W or Zn. The metal is oxidized when the epoxy composition is cured at high temperature. U.S. Pat. No. 4,290,912 to Wheatley, Jr. et al. shows the composition of a photosensitive resin which includes, in addition to other components, a triazine containing compound. The triazine can be used to dope the photosensitive resin for later forming a dielectric material on a surface. The triazine can be a photoactive compound. After the photosensitive resin is doped with the triazine, it can be used to make a dielectric film. Japanese Patent No. 54-23975 to Sagami Seikosha Kab 82138339de
