Photoshop CS5 is the latest version of the software released. It offers you new features, revised interfaces, and improved performance. Using Photoshop Elements Elements is a completely different kind of program. It is an entirely different image editing program and does not provide the same tools and features as Photoshop, although you can import images and layers from PSD and Photoshop files. As you progress in your Photoshop experience, you can and should consider transferring your images from Elements to Photoshop. Getting up to speed on Elements You can quickly look over the features of Elements in Table 1-1. But first let's get familiar with the steps involved in editing images in Elements. Preparing your images Before you start editing in Elements, make sure that your image is set up the way that you want to keep it. All your images should be set to be saved in the sRGB color space. For more on color spaces, see the nearby sidebar "Understanding color spaces." Figure 1-1 shows the Edit tab for an image. **Figure 1-1:** Set your image to be saved in the sRGB color space. You also need to set the image to be saved as a.jpg or.jpeg file. You can do this from the Image menu. Making sure the image is in focus To make sure you have properly focused your image before editing, select the Crop tool. On the keyboard, press Y. The active cursor turns into a cross-hairs icon with green lines inside it. Place the cursor inside the image and drag across it, as shown in Figure 1-2. Release the mouse button. You should see a small box appear that shows the distance to the nearest focus point. When you see this box, your image is in focus. **Figure 1-2:** The green box shows the nearest focus distance. Following are some more tips for choosing where your focus points are located: To bring the focus point to the bottom of the image, click the Rec button on the keyboard. A square symbol with a line in the middle appears at the bottom of the image. To bring the focus point to the right side of the image, click the Tilt button on the keyboard. A square symbol with a line extending to the right appears at the bottom of the image. To bring the focus point to the upper left corner of the image, click the Center button. A

This guide will walk you through the process of creating your first one-hour-long Photoshop/Elements tutorial or Photoshop class. Feel free to use this guide as a template if you have never created a Photoshop class before or you are just looking for an easy way to produce your first tutorial. Note: all Photoshop elements videos were created using Adobe Photoshop CC. The concepts and process for creating class projects are very similar for elements, but there is no online video editing for elements. The most popular alternative is Adobe Premiere. How to Create a Photoshop Class This tutorial focuses on creating a single one-hour-long video tutorial about Photoshop/Elements. Adobe Photoshop Elements is very similar to Adobe Photoshop, so you can probably create this tutorial using Adobe Photoshop also. To make the tutorial suitable for the paying audience, a teacher would need to monitor the class and record the lecture anyway, so why not make the video publicly accessible after the class is recorded? Here is an outline of what you should focus on when creating a one hour-long Photoshop tutorial. You can break this project down in any way you like, but you should be able to cover the following in at least 90 minutes. Video creation and production Gag order creation Choosing a project Creating your instructor persona Writing the lesson plan Creating the first video project Videography You should consider yourself a complete beginner in the field of production for your Photoshop class. You can either pay someone to create a traditional film-based video tutorial or create your own video using Adobe Premiere, to be used exclusively in your class. You can view many of the video tutorials, GIF tutorials and interactive lessons that you can create using Photoshop for free using the following websites: Video tutorials Adobe Stock Photoshop guru GIF tutorials Graphicriver Educators These websites all contain tutorials that have been written by Adobe employees and lots of freelance writers. Some of these videos are paid, but all of the links above are free. I recommend that you create your own tutorials rather than spending money on videos you already know you can create using Photoshop. The other main method of video production is Adobe Premiere. This website is a great resource for free video tutorials. I strongly recommend using Adobe Premiere, but you can use whichever video editing software you like for the first project. Ribonuclease P RNA recognition motif In molecular biology the Ribonuclease P RNA recognition motif is a conserved RNA motif consisting of approximately 12 nucleotides (nt) and belongs to the family of the Ribonuclease P small nucleolar RNAs (snoRNAs). snoRNAs are the guiding RNAs of the enzyme ribonuclease P, which cleaves the 5' leader of tRNAs to add a 3' oligouridine tail. They are structurally similar to H/ACA box small nucleolar RNAs but belong to a different class. The RNase P RNA is one of the four ribonucleoprotein RNase P core enzymes (eukaryotic and prokaryotic), which are homologs of the bacterial RNase P enzyme responsible for the maturation of 5' tRNAs. It is composed of one molecule of RNA and 3 molecules of protein. sRNAs can be divided into three major classes: H/ACA, e/i- and box C/D snoRNAs. The major classes in archaea and eukaryotes are H/ACA and snoRNA. Box C/D and e/i-snoRNAs are shorter than the H/ACA type and occur in archaea and eukaryotes. snoRNAs have been identified in Escherichia coli, Xenopus, human and plants. There is no RNA-based mechanism for protein regulation. snoRNA genes typically contain a hairpin-forming C/D box motif (in the 3'-untranslated region) and a hairpin-forming H/ACA box motif (in the 5' untranslated region) and are bound by protein subcomplexes. snoRNAs are believed to guide post-transcriptional modifications of other non-coding RNA and proteins.
