2. What is the difference between a client and a server? A server is a software application that performs a service to users by responding to requests for that service from a client. In the context of AutoCAD, a server provides AutoCAD services to clients (users). For example, if a user opens a drawing in AutoCAD, the AutoCAD service provides the user with editing tools, including drawing features, commands, and scripts. The user also provides input to the service through the interface (also called a user interface) of the AutoCAD application. The user interface may consist of keyboard and mouse inputs, or a tablet, for example. The application service provided by AutoCAD may be used to track changes to the drawing over time, but the application cannot directly edit the drawing.

3. What is the difference between server and server role? Server role is defined by the OS, programming language, database, and the programming model used to develop the server. All AutoCAD servers run under Windows Server operating system (OS), and all AutoCAD servers run under the 64-bit.NET Framework. Server roles are further classified as Windows, Linux, and Unix servers. 4. How do you run a server? A server can be run by either installing it on a workstation and launching the service, or by installing it on a server computer that is already running a service. 5.

What are the different types of AutoCAD servers? There are three types of AutoCAD servers: PC/Win32, PC/Linux, and PC/Unix. PC/Win32 and PC/Linux servers run under Windows Server operating system (OS), and PC/Unix servers run under UNIX. PC/Linux and PC/Unix servers have all the features of the PC/Win32 server. 6. Is a server important for AutoCAD? AutoCAD is a client-server application. When you open a drawing, AutoCAD requests the service from a server. The server provides the AutoCAD service to the user. 7. What are the different client types? A client is a software application or device that requests a service from a server. There are three types of AutoCAD clients: native client (AutoCAD), web client (AutoCAD Web Access), and mobile client (AutoCAD LT).

## What's New In AutoCAD?

Importing feedback from paper or PDFs has never been easier or faster. Customize your page previews with your printer's logo, custom headers or footers, or any other information you want to see in your print previews. (video: 6:50 min.) View and edit the previews in AutoCAD that are generated by the Import Utility. (video: 3:30 min.) Filter and modify your page previews based on the color, shape, size, or resolution. (video: 2:56 min.) Edit your PDF's metadata with batch operations to automatically update all the page previews in your drawing. (video: 1:22 min.) View all the page previews that are automatically generated by the Import Utility. (video: 2:56 min.) If you want to design objects that will be printed on standard or specialty paper, using the Fabric option in the Select Paper dialog box. See Paper and Fabric Options in the help system. (video: 3:10 min.) For Part drawings, use the Fabric option to automatically generate a preview for each part to show the best selection on the front, back, or both sides. (video: 1:30 min.) Access different pattern styles, including line, dot, and 3D flat (or 3D fill), using the Pattern Style dialog box. (video: 4:04 min.) When editing a specific pattern style, such as line, you can now apply patterns to one or more objects. See Pattern and Pattern Style Options in the help system. (video: 1:30 min.) You can now create a dotted and patterned fabric. Choose the Draw Dot or Draw Dot and Pattern Style options in the Pattern dialog box. (video: 2:58 min.) Re-use your workspaces to organize or customize your AutoCAD workspace in an easy and efficient way. (video: 1:16 min.) Add Design Intent to dynamic objects such as Dynamic Parts and Dynamic Components with Design Intent. Design Intent is a hidden property in the property manager that doesn't affect the attributes of the object. See Dynamic Features in the help system for more information. (video: 1:10 min.) Include different types of annotative, or graphics, views in your drawing. You can also set the annotation size in a new dialog box, named Annotation Size. See Annotations in
